# LivionKey30

- Front camera.
- Key recognition for each key locker.
- Possibility to open the lockers remotely.
- Plug & Play, simple and quick commissioning.
- By default a secure mobile connection. It is possible to connect the box to a Wi-Fi network.
- Voltage supply 18V DC.
- Number of lockers 30.

LivionKey30 is an automated key box that combines both modern technology and user-friendliness. The key box can store up to 30 keys simultaneously.

## Functions

- Battery backup.
- Web-based administration program for distribution of pin codes directly to the user via SMS or email.
- Alarm functions if the box is moved, the power is disconnected, the battery has low power, communication to the box is disconnected, in case of error when the locker door is closed.
- The box can send out notifications to a wanted person, when someone fetches a key, returns a key or does not return a key.
- Reliable, once the user has received a pin code, it is also stored locally in the box and can be used even if the network is temporarily down.
- Can be integrated via API against third party programs, such as a booking program.

# LivionKey30 Outdoor

Remote controlled device for digital management and administration of keys, key cards and tags. The machine makes it easy to hand out and receive keys in a controlled manner.

- Can be mounted outdoors (IP43).
- Front camera.
- 30 Key lockers.
- Key recognition for each key locker.
- Locker camera.
- Possibility to open the lockers remotely.
- Log every key event.
- Plug & Play, simple and quick commissioning.
- By default a secure mobile connection. It is possible to connect the box to a Wi-Fi network.
- Voltage supply 18V DC.
- Battery backup, in case of short power cuts.

Functions see Livionkey30

- Reliable, once the user has received a pin code, it is also stored locally in the box and can be used even if the network is temporarily down.
- Can be integrated via API against third party programs, such as a booking program.

# LivionKeyPad

LivionKeypad is a smart keypad solution for managing electric locks and access rights. With LivionKeypad, you can control who gets through any doors with an electric lock and when.

- You can also remotely manage, access, and create an indefinite number of time-limited or permanent pin codes. In addition, with regard to locks that can detect whether a door is open or closed, LivionKeypad can send a 'door open' message to any selected persons.
- The keypad communicates wirelessly with an electric lock control unit, making it safe to use.
- It can be installed both out and indoors, and using a web-based program you can easily control all your keypads remotely. You can also remotely create and send new pin codes and change existing access rights.
- You can set your pin codes so that they are valid during a certain period of time, for example, or only on certain days or at certain times. Doors can also be opened remotely if necessary.
- The system has an API interface that allows it to communicate with other systems of yours.
- The solution can also be combined with LivionKey30 key automats, in which case the pin code is the same for the automat and the keypad. This enables your clients to enter the building easily.

# LivionKey Register

LivionKey register is a system for managing keys and automating their processing. The system is easy to use and take into use. There are no restrictions on the number of users, the number of locations/properties or the number of keys and it works 24/7. LivionKey provides a way to manage all your keys.

## LivionKey register contains the following functionalities

- User management.
- Management of the hierarchical structure of locations, ie organizational structure (eg country, city, region, building) and the possibility to grant access rights to users at each hierarchical level.
- Key management: add, remove, edit.
- Key processing (handover/return), manually or by LivionKey automat.
- Alarm logs.
- Event logs of key processing.
- Usage reports for the selected organizational level or building.
